25
        @Resource
26
        ActivityService activityService;
```

获取轮播图在服务器上的地址

```
/**

* @return 返回的是一个json串,解析出来是一个list<String>,字符串分别是图片在服务器上的地址

* @description 获取轮播图在服务器上的地址

*/

@RequestMapping("/getRotationChartPictures")
public String getRotationChartPictures() {
    return new Gson().toJson(activityService.getRotationChartPictures());
}
```

获取活动列表

```
1
2
        * @param activityKind 热门或者近期,1或者0
3
                             页码
        * @param pageNum
        * @param pageSize 页大小
4
        * @return List<Activity>集合的JSON串,没有活动则是"empty"
5
6
        * @description 获取活动列表
7
8
       @RequestMapping("/getActivityList")
       public String getActivityList(Integer activityKind, Integer pageNum,
    Integer pageSize) {
10
           if (activityKind == null || pageNum == null || pageSize == null) {
11
               System.out.println("getActivityList Error");
               return "ErrorParameter";
12
13
           }
```

```
String activities = activityService.getActivityList(activityKind, pageNum, pageSize);
return "empty".equals(activities) ? "" : activities;
}
```

获取活动详细信息

```
1
 2
         * @param activityId 活动的id
         * @return 返回ActivityDetail的json串,如果没有找到对应的活动详细信息则返回空串""
 3
         * @description 获取活动详细信息
 5
 6
        @RequestMapping("/getActivityDetail")
 7
        public String getActivityDetail(Integer activityId) {
 8
            if (activityId == null) {
 9
                System.out.println("getActivityDetail Error");
10
                return "ErrorParameter";
11
            }
12
            String activityDetail =
    activityService.getActivityDetail(activityId);
            return activityDetail != null ? activityDetail : "";
13
14
        }
```

判断是否收藏

```
1
 2
         * @param id
                            用户id,注意不是getUserId,是getId
 3
         * @param activityId 活动的id
 4
         * @return 返回true或者false的字符串
 5
         * @description 判断是否收藏
         */
 6
 7
        @RequestMapping("/judgeCollected")
        public String judgeCollected(Integer id, Integer activityId) {
 8
 9
            if (id == null || activityId == null) {
10
                System.out.println("judgeCollected Error");
                return "ErrorParameter";
11
            }
12
13
            boolean flag = activityService.judgeCollected(id, activityId);
            return flag ? "true" : "false";
14
15
        }
```

获取收藏的活动列表

```
1
2
        * @param id
                        用户id,注意不是getUserId,是getId
3
        * @param pageNum 页码
4
        * @param pageSize 页大小
5
        * @return 返回List<UserCollectActivity>集合,如果没有就返回"empty"
        * @description 获取收藏的活动列表
6
7
        */
8
       @RequestMapping("/getCollectedActivities")
       public String getCollectedActivities(Integer id, Integer pageNum,
    Integer pageSize) {
10
           if (id == null || pageNum == null || pageSize == null) {
```

```
System.out.println("getCollectedActivities Error");
return "ErrorParameter";
}
return activityService.getCollectedActivities(id, pageNum, pageSize);
}
```

添加活动

```
/**
 1
 2
        * @param files
                                 客户端传递若干MultipartFile文件,要求请求的参数名
    字都
 3
                                  是file(就是要重复),这边接收就是自动加入
    List<MultipartFile>中
4
        * @param activityDetailJson 客户端将封装好的ActivityDetail类转换为Json串发送
    过来,
5
                                  注意ActivityDetail里面的Activity类也得把数据都
   封装好,
6
                                  添加操作,不需要设置id值,因为数据库id是自增的
 7
        * @return 返回一个添加成功或者失败"true"或者"false"
        * @description 添加活动,接受一个ActivityDetail类的Json串数据,且参数名称为
    activityJson
        */
9
10
       @RequestMapping("/addActivity")
11
       public String addActivity(@RequestParam("file") List<MultipartFile>
    files, String activityDetailJson) {
12
          if (activityDetailJson == null) {
              System.out.println("addActivity Error");
13
14
              return "ErrorParameter";
15
16
           return activityService.addActivity(files, activityDetailJson)?
    "true" : "false";
17
       }
```

获取报名的活动列表

```
1
 2
        * @param id
                     用户id,注意不是getUserId,是getId
 3
         * @param pageNum 页码
 4
        * @param pageSize 页大小
 5
        * @return 返回List<UserCollectActivity>集合,如果没有就返回"empty"
        * @description 获取报名的活动列表
 6
 7
        */
        @RequestMapping("/getEnterActivities")
 8
9
        public String getEnterActivities(Integer id, Integer pageNum, Integer
    pageSize) {
10
           if (id == null || pageNum == null || pageSize == null) {
               System.out.println("getEnterActivities Error");
11
                return "ErrorParameter";
12
13
            return activityService.getEnterActivities(id, pageNum, pageSize);
14
15
        }
```

获取发布的活动列表

```
2
         * @param id
                     用户id,注意不是getUserId,是getId
 3
         * @param pageNum 页码
 4
        * @param pageSize 页大小
 5
        * @return 返回List<UserCollectActivity>集合,如果没有就返回"empty"
 6
         * @description 获取发布的活动列表
 7
        */
 8
        @RequestMapping("/getPublishActivities")

    pageSize) {
           if (id == null || pageNum == null || pageSize == null) {
10
               System.out.println("getPublishActivities Error");
11
12
                return "ErrorParameter";
13
           }
14
            return activityService.getPublishActivities(id, pageNum, pageSize);
        }
15
```

根据若干条件筛选活动

```
1
 2
         * @description 根据若干条件筛选活动,每个参数都给我传过来,如果用户没有做出对应的选
    择, String类型传empty, Integer类型传-1
 3
        * @param typeName 小类活动的名称
        * @param lowCost 价格区间的低区间
 4
 5
        * @param highCost 价格区间的高区间
        * @param howManyDays 近多少天
 6
        * @param city 市
        * @param county ⊠
8
9
        * @param pageNum 页码
10
        * @param pageSize 页大小
11
        * @return 返回一个List<Activity>集合的JSON串,如果集合为空,返回字符串"empty"
12
        */
13
        @RequestMapping("/screenActivities")
        public String screenActivities(String typeName, Integer lowCost, Integer
14
